

Connecting to an AppleTV from a Mac

Screen Mirroring

Screen Mirroring will duplicate your display on the projector/TV, and is suitable for general content. If you're playing long form content from a streaming service like Netflix, you must play the content on the AppleTV itself, due to DRM copyright restrictions.

To start Mirroring:

1. Open Control Center:
 - Click the  icon in the upper-right corner of the screen.
2. Click Screen Mirroring .
3. Select your Apple TV, from the list, it should be named after your classroom.
4. If an AirPlay passcode appears on your projector/TV screen Simply enter the password on the device.
5. if you wish to use the projector as an independent display (extend mode), select Use as separate display from the screen mirror menu.

Connecting with Airplay

Airplay will open media currently playing on your mac on the Apple TV. This does not duplicate the display, allowing you to perform other tasks on your device while the media plays. This is preferred for projecting things like longer videos or music. Note: Currently air playing video feature only works in the Safari web browser.

Air playing video (IN SAFARI)

1. On a supported site, such as YouTube or many other web video sources, Press the Airplay button  in the corner of the video.
